DEL

C2

19. (Amended) A method of producing prefillable glass syringe barrel assemblies comprising the steps of:

- forming a plurality of clean syringe barrels in a glass forming device for shaping a cylindrical glass tube into syringe barrels having a first open end for receiving a syringe plunger and a second open end for discharging contents from said syringe barrels;
- annealing said glass syringe barrels at a temperature of at least 500°C; then,
- immediately transferring said syringe barrels to at least one housing assembly for maintaining a predetermined cleanliness level.
